

## **AMT-N6439 12.1" TFT Pal Monitor for Surveillance Briefcase**

### **The Product**

The AMT-N6439 is a 12volt powered, 600 x 800 resolution 12.1" Pal Monitor.

The unit was made to be especially slimline by mounting all of the electronics to the rear of the LCD mounting plate. This was required because the customer needed to put the display into the lid of a briefcase, and therefore required it to be less than 40mm deep.

The unit also had 4 mounting brackets: 2 facing the rear of the display, designed to be used to facilitate base mounting of the display; and 2 facing forward to mount the fascia panel onto around the bezel.

### **The Application**

This display was mounted into a briefcase used for monitoring camera's which had been temporarily placed for the purpose of surveillance intelligence. The Briefcase received the wireless signals from the remote cameras for recording, and the screen is used to monitor the camera signals coming in. The briefcase is portable and designed to be used in a vehicle, running on 12V from the vehicle or battery power, within the case.

### **Features**

- Extreme Slim-line 12.1" TFT display
- Base mounting
- 12 volt DC
- Expedient delivery time in this instance (2-3 weeks)
- Built and supported in Australia by Amtex Electronics Pty Ltd
