

### AMT-N6187 15.1" Fully Enclosed VGA Monitor for Control Room

#### The Product

The AMT-N6187 is a robust 15.1" stand alone VGA monitor incorporating a 15.1" LG Philips TFT LCD display, a VGA video control card, OSD switch at rear, backlight inverter, front bezel (can be touch) and 240V ac 30 watt power supply; all encased in a steel enclosure measuring 60 mm in depth, and mountable by a swinging lockable U-bracket.

The swinging lockable U-bracket allows the monitor to be wall mounted, desk mounted, or roof mounted: and for the angle of the display to be set into position. (By mounting the U-bracket from the roof or desk using only one locking point, it is also possible to get both 360 degree horizontal and vertical angular rotation of the display).

#### The Application

The application for this unit involved a control room which had limited space for an extra monitor. The AMT-N6187 provided both a rugged and compact solution for the environment.

#### Features

- Robust powder-coated steel enclosure.
- Standard VGA input to suit generic hardware
- Swinging Lockable U-mounting bracket
- Slimline design (60mm deep)
- Local manufacture at AVisum Pty Ltd
- Custom finished to suit the application
