

Trackball Options

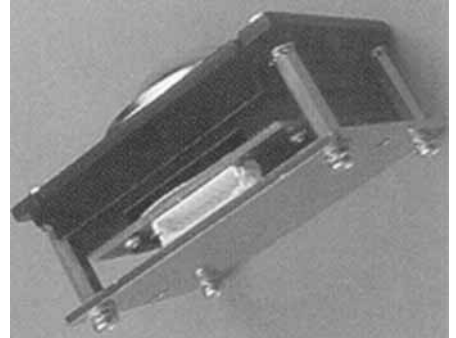

Backlit Trackballs

Several types of trackballs, such as the 38mm and the 50mm, can be made available as a backlit version. Two (or more) high intensity LEDs light up the opaque ball. Typical applications can be found in studio appliances, Naval equipment, entertainment etc.,

Anti-vandal Backplate

This steel plate can be used with the 38mm trackball module and will limit hostile impacts on the top of the ball to an acceptable level and protect shafts, bearings and other components of the unit. Typical applications are in public information kiosks or consoles.

Pushbutton Switches

We also offer IP65 sealed, stainless steel pushbutton switches which can be connected to our trackball modules as external "Mouse Button" switches.
