

My-T-Touch On-Screen Keyboards

FEATURES

- Acts exactly like a physical keyboard
- Includes NT/2000/XP Network Logon Keyboard module
- Works with all Windows applications
- Floats above all other windows for intuitive operation
- Edit and Numeric Keypads available as separate panels
- Over 60 different User selectable button actions (Esc, F1, double click, etc)
- Keystroke sequences can be assigned to Macro buttons

We have a range of virtual on-screen keyboards and on-screen utilities that provide the perfect user interface for touchscreens, pen, handheld and wireless systems.

My-T-Touch provides a natural, intuitive extension to the touchscreen interface. My-T-Touch provides On-Screen keyboard emulation that works with ANY Windows program. Ideal for network logons, security passwords, ID authentication, production quantity entry, notes, name entry, and a variety of other uses that completes custom applications using touchscreens.

My-T-Touch is a Windows software program that provides a powerful interface through a touchscreen pointing device by providing on-screen keyboards, user programmable macros, and complete control over all computer functions.

By allowing systems to operate without the need for a physical keyboard, external templates, membranes, or buttons, My-T-Touch can provide the finishing touch on sealed systems that only requires the touchscreen interface for user input.

My-T-Touch uses a concept found in fighter planes, helicopters, tanks, and automobiles. That concept is called "Heads Up Display" technology and its principal objective is to keep the users focus and concentration centered in one plane. My-T-Touch uses that concept to reduce the visual re-focusing and re-positioning, caused by the heads up and down motion of going from screen to keyboard to screen, and the resulting confusion it causes.

Over 45 "Heads-Up Display" keyboards in 12 different sizes

ABCD Alphabetical, QWERTY, 3 DVORAK's, and over 40 international (German, Spanish, French, Hebrew, Russian, Greek, etc) with Edit and Numeric panels. **Minimise keystrokes, mouse clicks and menu selections.** Store up to 2000 keystrokes/menu selections (or the applications macro scripts) on each button. Up to 15 buttons can be grouped on individual Panels, which auto-open when their assigned application becomes active.

Assignable Functions for Pointing Device Buttons

Assign any of 63 different functions to each button. Popular keys such as Shift, Esc, Enter, Ins, Ctrl, etc, can be assigned at anytime.

Pop-Up Calculator with pop-up Tape and Send Function

A standard 4 function calculator with memory, that always stays on top, has its own pop-up Tape and Send function that places the display information right into your current document or field.

Built in Magnifier

If necessary, a built-in Magnifier panel can be displayed to show a magnified view of the current area (mouse cursor as center).

Developer friendly

Show & Hide keys, program keys in Key Options, Custom logo display, Operator mode, on-demand functionality. The Developer's Kit comes with all kinds of utilities,

source code, and a wealth of information for integrating My-T-Touch with your own application.
